

# SCIENCE AT THE BIG APPLE ACADEMY

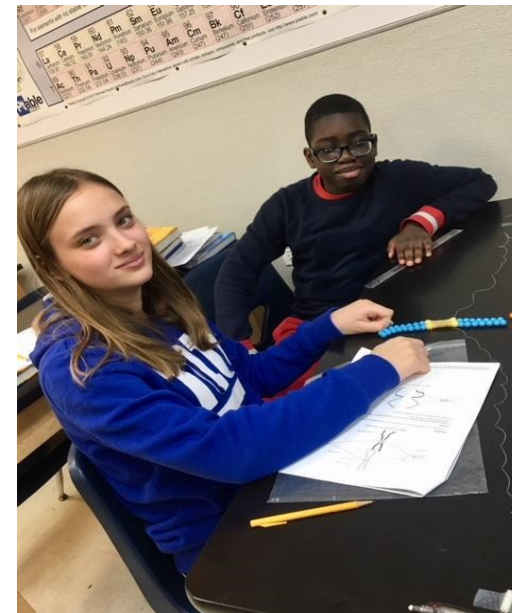

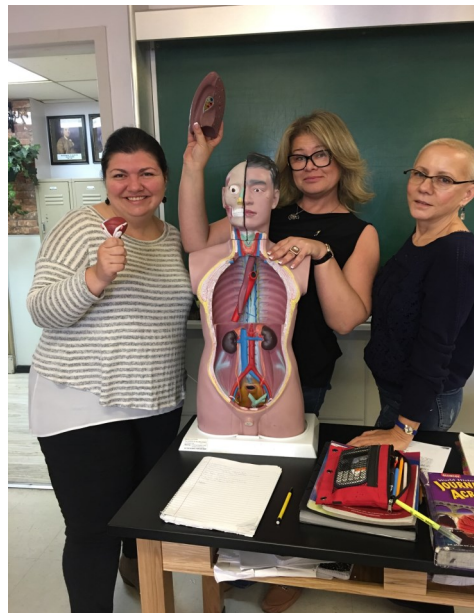

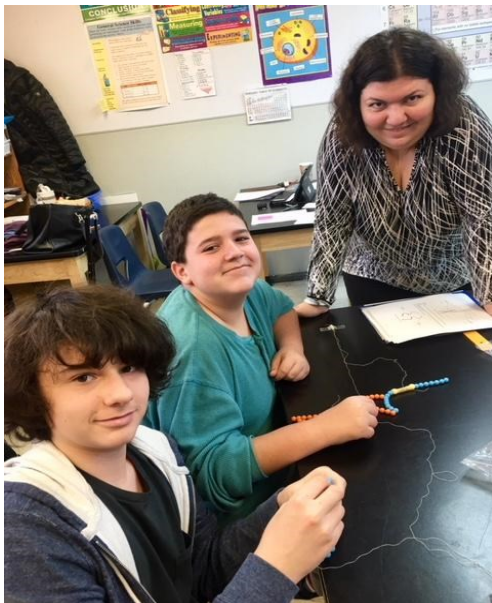

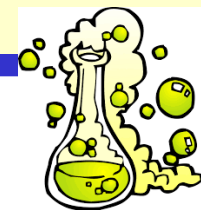

Science is a great subject through which problems and questions dealing with natural phenomena can be analyzed, defined, and tested. Our Science teachers display high standards of instruction and expand their teaching beyond conventional textbooks and worksheets. They uncover the magic of science each week through the infinite discovery process which inspires, motivates, and engages our students.

# MAGIC OF SCIENCE

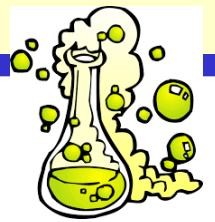

Children learn best when knowledge is acquired naturally through social interactions, sharing of expertise, and various experiences brought to the classrooms from the outside world. Learning Science becomes an unforgettable experience when it is presented beyond the textbooks and worksheets- when students can see the scientific process in action, touch objects, and ask questions. For the last two weeks, the Big Apple Academy has turned into a scientific laboratory of creativity and excitement. Let's take a quick peek at the "Mad Science Presentations"!
