Science at The Big Apple Academy

Big Apple Academy

Principal's Desk

Big Apple Academy

Science is a great subject through which problems and questions dealing with natural phenomena can be analyzed, defined, and tested.

Our science teachers uphold rigorous teaching standards and go beyond traditional textbooks and worksheets.

Every week, they unveil the enchantment of science through an ongoing journey of exploration that ignites and captivates our students.

Within the confines of our classrooms, we sow seeds and conduct hands-on plant experiments using genuine soil. Mrs. Braylovsky guides students in exploring the art of planning, experiencing the soil's texture, and assessing seed hardness.

Our students can witness the growth and transformation of plants and acquire the skills needed to nurture them.

Big Apple Academy

Exploring history and examining ancient artifacts and fossils is an enjoyable way to gain knowledge. Learning takes on a seamless quality as students acquire knowledge through observations and social interactions.
